Galileo (1995)

Pioneer-Venus (1978)

The Alvin Seiff Award

presented to

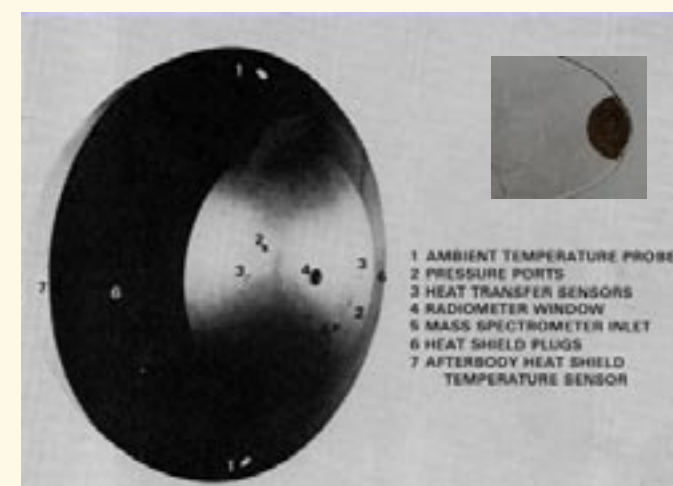

Dr. Hasso B. Niemann

The International Organizing Committee (IOC) of the International Planetary Probe Workshop is proud to present this award in recognition of Dr. Niemann's contributions to the advancement of mass spectrometry technologies; and for the development and use of the techniques of gas chromatography and mass spectrometry applied to solar system exploration spanning missions from PAET to Huygens.

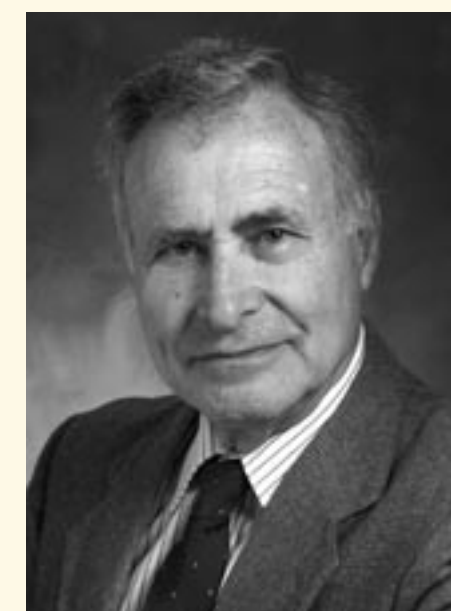

This award is named in recognition of Alvin Seiff's outstanding contributions to the technology, science, and mission planning of atmospheric entry probe missions that advanced the knowledge of planets or moons in the solar system, and for the mentoring of younger engineers and scientists in these fields. These are the traits for which Al Seiff is legendary in his pioneering of our field.
